

### **THE SPECIFICATION:**

Please replace the paragraph that begins on page 8, line 20 and ends on page 9, line 2 with the following:

This embodiment differs from the second embodiment described above in that L-shaped pin members are supported by the circuit substrate 4 as first and second probes 11 (shown in Fig. 7) and 12 (shown in Figs. 7 and 9) and that a ground pattern 13 provided on the surface of the circuit substrate 4 is used as the reflective face for the two probes 11 and 12. Thus, within the case 2, the two waveguides 2a (shown in Figs. 7 and 8) and 2b (shown in Figs. 7 and 9) are bent at a right angle toward the circuit substrate 4, and the tip of the first probe 11 extends into the first waveguide 2a, while that of the second the probe 8 extends into the second waveguide 2b as shown in Fig. 7.
